Crises and conflicts over limited energy resources together with Europe's import dependency on fossil fuels and the challenges faced by climate change have put energy policy increasingly on the European agenda. EU energy policy and the Energy Union have made remarkable progress during the second Barroso Commission and the Juncker Commission. Even in areas that traditionally lie in the national decision-making. This book takes stock of the last two commissions and examines the influence of external factors as well as political actors and their ambitions on the integration in EU energy policy.

The book was published in the series: Schriften des Zentrum für Europäische Integrationsforschung (ZEI), as Volume 82.
